

Bitbar PrivateCloud is a remotely hosted Device-as-a-Service mobile app testing solution designed for companies that need to adopt effective CI/CD practices and frequently test apps on dedicated **Android** and **iOS** devices under a highly secured environment anytime anywhere. It empowers companies to streamline DevOps processes and accelerates reliable releases of quality mobile apps to end customers.

BENEFITS AND CAPABILITIES

ALL UNLIMITED – SCALABILITY, DEVICE ACCESS & CONCURRENCY

We offer the ultimate scalability to easily expand the device farm from tens to hundreds to even thousands of devices that perfectly respond to your unique needs. Your globally distributed teams will always be able to get unlimited device access and instantly execute parallel tests on all of the devices.

EXTENSIVE INTEGRATION FOR AN OPTIMAL CI/CD PIPELINE

Our built-in integration support and open APIs enable you to easily integrate with build systems and CI/CD tools that your developers and testers already use to create a collaborative Dev-Test environment.

ENTERPRISE-GRADE SECURITY, ENTERPRISE-LEVEL ACCESS

Access to service is VPN and SSL secured, all data, applications, results are encrypted, all login details are saved & allowed only under authorized access and specified networks. All devices hosted under Bitbar PrivateCloud are located in our secure lab with restricted access.

EXCLUSIVE ADMINISTRATION ON THE INFRASTRUCTURE AND DEVICES

As the admin, you can easily create new users and grant individuals sub-admin privileges to better manage different teams. With admin access, you can also flexibly allocate particular devices to specific teams for exclusive access and prioritize test execution to ensure you always meet the targets.

3 LEVELS IN REMOTE ACCESS - AUTOMATION, MANUAL AND DEBUG

While executing your application on devices, either manual or automated testing methodologies are fully available for you. In manual sessions you can get tangible benefits from intangible needs of managing devices. With test automation, your team can enjoy benefits of Bitbar's renowned ability to run tests on hundreds of real devices simultaneously. Your debugging tools/environments can be bridged into these devices as well.

MANUAL ACCESS

AUTOMATED/SCRIPT ACCESS

DEBUG ACCESS

FRAMEWORK AGNOSTIC WITH FURTHER CUSTOMIZATION

Bitbar PrivateCloud supports all of the open source test frameworks and languages. Built on top of widely accepted open standards, it can be further customized to support your own frameworks and allow you to run the same tests locally and in the cloud.

GLOBAL PREMIUM SUPPORT 24/5

We stand behind you to take your business success as part of ours. Our Customer Success Team is at your disposal anytime for technical problems, software onboarding, training sessions, etc. to make sure you achieve a higher ROI on mobile test automation.
